

GUIDE FOR INSTALLING BETTER-MAPS (NBC NEWS FORMAT)

STEP 1: INSTALL EXECUTIVE MOD

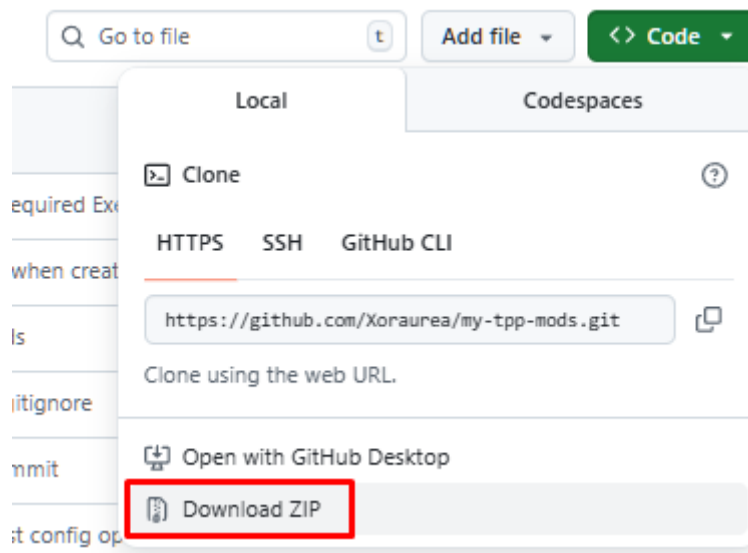

- First, you must install "Executive Mod"-> <https://github.com/Xoraurea/tpp-executive>

Setting up Executive

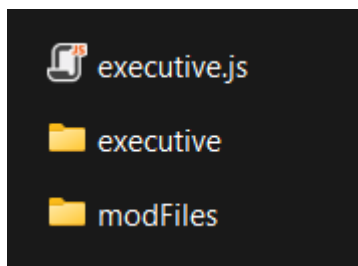

Installing Executive is as easy as copying the mod loader's files to your game directory and making two small modifications to existing files. Your game folder can be found by opening your Steam library, right-clicking on `The Political Process`, opening `Properties`, navigating to `Installed Files` and then clicking `Browse`. For most people, the directory this opens will be at `C:\Program Files (x86)\Steam\steamapps\common\The Political Process`.

1. Copy `executive.js`, the `modFiles` directory and the `executive` directory to your game folder.
2. Add three lines to the pre-existing `index.html` file in the game folder.
3. Modify the `package.json` file with one additional line.
4. Add mods and play!

- Download the zip and extract the folder data.

- We will only keep the following files/folders.

- Each person will have a different route depending on how they set it up, but the default shape would have to be in this route

`C:\Program Files (x86)\Steam\steamapps\common\The Political Process.`

- The next step is to modify index.html and package.json:

Modifying index.html and package.json

Note: This step is **only** necessary if the version of Executive you've downloaded doesn't contain its own pre-modified `package.json` and `index.html` files. If it does contain these files, you can simply copy them over to your game folder, overwriting the original versions. Once you've done so, skip to [Installing mods](#).

For Executive to load successfully, you'll need to copy three lines into two game files – future releases of Executive will likely include an install script to simplify this process. This step **must** be repeated if The Political Process updates or you reverify your game files in Steam.

The first file to modify is `index.html`. Open the file in any text editor, and scroll down until you find the line containing nothing except `<script>`. Paste the following two lines *below* the `<script>` line.

```
{ const fs = nw.require('fs');
globalThis.preGlobals = Object.keys(globalThis);}
```

Once you've pasted these lines in, the start of the section should match the following.

```
<script>
{ const fs = nw.require('fs');
  globalThis.preGlobals = Object.keys(globalThis);

  nw.Window.get().evalNWBin(null, 'binFiles/variables.bin');
}
```

- `index.html`:

```
<script>
{ const fs = nw.require('fs');
  globalThis.preGlobals = Object.keys(globalThis);
  nw.Window.get().evalNWBin(null, 'binFiles/variables.bin');
  nw.Window.get().evalNWBin(null, 'binFiles/candidateCreation.bin');
  nw.Window.get().evalNWBin(null, 'binFiles/committeeCreate.bin');
}
```

After pasting these two lines, scroll down to the line containing nothing except `</script>`. Once you're there, paste the following snippet *above* (not below) the `</script>` line.

```
nw.Window.get().eval(null, fs.readFileSync("executive.js", "utf-8")); ;;
```

Once you've pasted this line in, the end of the section should match the following.

```
nw.Window.get().evalNWBin(null, 'binFiles/uiMenus.bin');
nw.Window.get().eval(null, fs.readFileSync("executive.js", "utf-8")); ;;
</script>
```

```
nw.Window.get().evalNWBin(null, 'binFiles/electSimulator.bin');
nw.Window.get().evalNWBin(null, 'binFiles/endorsements.bin');
nw.Window.get().evalNWBin(null, 'binFiles/judicialBranch.bin');
nw.Window.get().evalNWBin(null, 'binFiles/uiMenus.bin');
nw.Window.get().eval(null, fs.readFileSync("executive.js", "utf-8")); ;;
</script>
</body>
</html>
```

- We modify the package.json file

Once you're done, save the file and close it. You can now move on to `package.json`, which only requires one modification. Find the line containing `"main": "index.html"`, and insert a new line below, pasting the following snippet.

```
"chromium-args": "--mixed-context",
```

```
{  
  "main": "index.html",  
  "name": "the_political_process",  
  "chromium-args": "--mixed-context",  
  "window":  
  {  
      
  }  
}
```

STEP 2: INSTALL BETTER-MAPS MOD

- Next step installation of "better-maps" -> <https://github.com/Xoraurea/my-tpp-mods>
- We do the above (as in step 1), we download the zip, uncompress it and we are left with only the folder "better-maps".

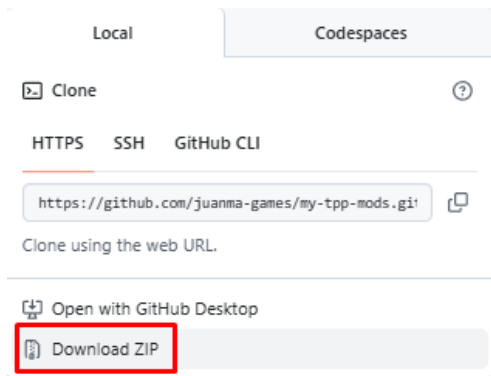

- We added it in the folder "modFiles".
- With all the above done, we will have the mod "better-maps" of Xoraurea activated and functional.

Version: 0.352
Copyright © 2019 Verlumino Studios LLC
Running Executive for The Political Process (b0.1.2)
2 mods loaded

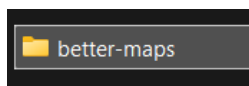

STEP 3: DOWNLOAD "BETTER-MAPS" (NBC NEWS FORMAT)

- We download the content, decompress it and get the folder "better-maps".

Now the next step after getting the folder is very simple.

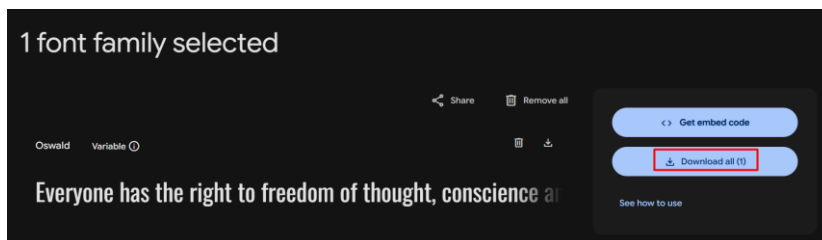

You go to the modFiles folder and completely change the existing folder of better-maps and replace it with this one.

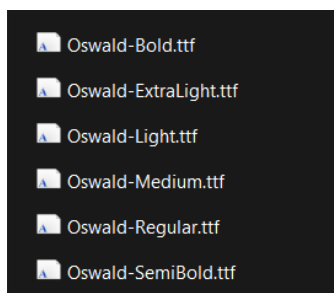

As last, if you do not see the font type correctly, you should install it.

You must install on your computer, the following fonts type

<https://fonts.google.com/specimen/Oswald>

You only need to install the following list.

You have reached the end, the mod is functional. Enjoy it ;)

This guide has been performed from 0 to check that all steps work correctly.
